

splitting wood

Sometimes it's better just to go with the grain.

Sterling Matterhorn Skis

Sterling combines your choice of santos palisander, bird's-eye maple, or madrona burl top sheets with titanium reinforcements and a "top-secret" wood core to boost the ski industry's wood factor (not to mention the price point). Hurry! Fewer than 150 pairs produced this year.

Gold & Wood Sun Wear

Parisian craftsmen take three full days to craft the temples of a single pair of Gold & Wood glasses, and though each is distinct from the next, all incorporate the simple, classic aesthetic of wood, lavishly adorned with precious metals.

Bogner Bamboo Helmet and Telescopic Ski Poles

Bogner has never been afraid to incorporate interesting materials into its luxury ski gear. Both helmet and poles blend eco-friendly bamboo with serious aluminum construction for head-turning good looks and good-looking turns.
